NEW 75K Stainless Steel, Hermetically Sealed, Easi-Post Weigh Bar®

I am pleased to announce that we now have available a stainless steel, hermetically sealed version of the 75K Easi-Post Weigh Bar.

This exciting new option compliments the other Easi-Post component upgrades that were introduced earlier in the year. It provides a solution for those customers and applications that are highly sensitive to corrosion concerns and allows you to meet bid specifications stating that load cells must be stainless steel, hermetically sealed.

COC #87-119

Specifications

The new Easi-Post offers the same legendary robustness and reliability of our other truck scale Weigh Bars used for many years, but also provide a higher capacity rating and greater degree of corrosion protection with stainless steel construction:

» **Material:** 17-4 stainless steel, hardened to Rockwell C42

» **Bellows:** Stainless steel, robotically welded

» **Physical Dimension:** 3.75" outside diameter. Physically mounts exactly the same as all 60K and 50K Weigh Bars used in BridgeMont and XT Truck Scales, so older systems can be upgraded to the new Easi-Post standard.

» **Output:** 3 mv/V at 75,000 pound capacity. *Note: Cannot be mixed with 50K or 60K Weigh Bars in the same system due to different outputs.*

» **Gross Capacity:** 75,000 lbs

» **Safe Overload:** 200%

» **Cable:** Stainless steel jacketed cable. 40 ft is standard cable length.
